Market map is a representative overview of venture-backed or growth-stage providers in each segment. Companies listed have received venture capital or other notable private investments.

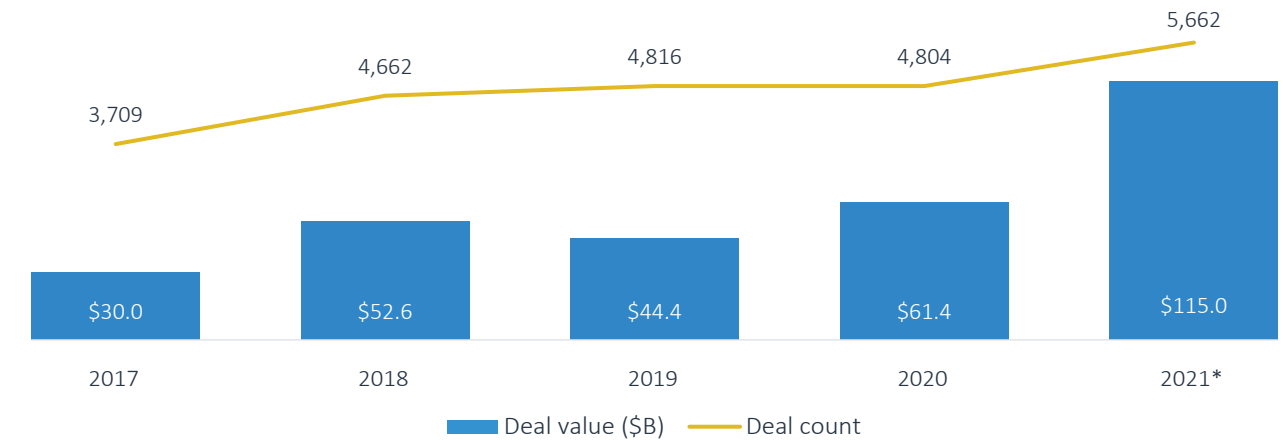

# VC activity

AI & ML demonstrated weakness in VC funding relative to technology overall. AI & ML VC deal value grew less robustly than software VC overall, growing only 87.2% from \$61.4 billion in 2020 to \$115.0 billion YoY. US software VC funding grew 131.1% in 2021, yet median late-stage VC deal size in particular only grew 27.7% to \$15.7 million, suggesting muted growth in the volume of high-value VC deals. Deal value in Asia contributed to these muted growth numbers, as we only tracked 62.1% growth in deal value. Some of the hype has departed from pure-play AI companies, as top-performing VC investors dedicated over six times more early-stage and seed deal value to Web3 & decentralized finance (DeFi) than AI & ML in Q3, according to our [Emerging Tech Indicator](#). Deal value is led by applications in healthcare, information technology (IT), and consumer, with each category raising over \$12 billion in 2021.

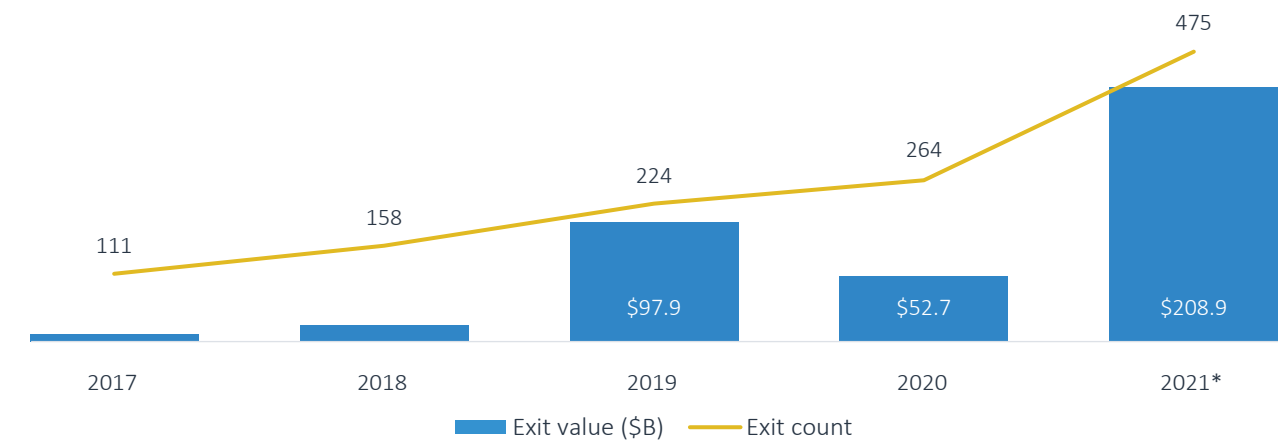

VC exit value swelled during the year, driven by several AI-integrated decacorn exits, though pure-play AI companies did not achieve outstanding outcomes. We tracked \$208.9 billion in exit value across 475 exits, a 79.9% increase in exit count YoY. Public exits more than doubled from 33 to 72, following a theme we have been tracking that AI companies are achieving better outcomes in public markets than via M&A. [Kuaishou](#) and [UiPath](#) contributed over \$80 billion of this total through their IPOs. Autonomous vehicles also contributed over \$20 billion in exits with four SPAC exits and two significant IPOs. We tracked 36 mega-exits in 2021 after only 13 in 2020. In Q4, the trend of AI-integrated mega-acquisitions continued with [Rocket's](#) \$1.6 billion purchase of personal finance startup [Truebill](#). We believe that legacy companies will view \$1 billion-plus AI acquisitions as ways to modernize their businesses.

# Segment overview

## Horizontal platforms

Startups are unbundling hyperscaler AI model platforms into point solutions for specific steps of the ML development lifecycle.

## Verticle applications

Fast-growing AI use cases for startups include hospital administration, fleet management, fraud prevention, sales & marketing, human resources automation, proptech, and personal health.

## Semiconductors

Incumbent innovation in server processing is creating barriers to entry for data center startups; edge processing can yield greater growth.

## Autonomous machines

Autonomous vehicle development efforts require AlaaS to manage training data and safety.

# About PitchBook Emerging Tech Research

## Independent, objective and timely market intel

As the private markets continue to grow in complexity and competition, it's essential for investors to understand the industries, sectors and companies driving the asset class.

Our Emerging Tech Research provides detailed analysis of nascent tech sectors so you can better navigate the changing markets you operate in—and pursue new opportunities with confidence.
